PROJECT DESCRIPTION

The VISION LIGHT Project consists in the implementation of a number of interventions within the existing Ploiesti Refinery. Part of the VISION LIGHT project is the revamp of existing Integrated Crude Atmospheric and Vacuum Distillation Unit DAV2, to target an operating capacity of 4.5 MTY of heavy domestic crude. The revamp activities are based on three different feed qualities. DAV2 package includes the OSBL feed and product rundown lines.

FOSTER WHEELER ITALIANA SCOPE OF WORK

- FEED Modifications and EPCM services
- Reimbursable type of contract for the FEED Modification services
- EPCM phase could be executed under reimbursable or lump sum compensation scheme, both are contractually foreseen
- Services executed with the support of a local engineering company
